

6th Annual Shorthorn & ShorthornPlus
Bull and Female Sale

**PREDICTABLE
GENETICS
PROVEN
PERFORMANCE**

March 5, 2016, Pawnee Rock, KS

**LOVING
FARMS**

FELLOW CATTLEMEN,

This is the one point in the year when we pause and reflect on where we are headed and how far we have come. We have seen an amazing run in the cattle business and agriculture in general. Many of the high feelings have wavered a bit, but the silver lining is that good profits are still being made in the beef industry. The cow/calf man still has a product that is in high demand and the higher the value product you can deliver, the more profit there ultimately is to obtain. Good genetics are not just a novel concept, they are the cornerstone of a profitable operation. As we move ahead in this industry, the ability to put together a genetic package that can weather the storms will be paramount. We think if you take the time to study our offering, you will see a balance of those long term profitability traits.

We have continued to build upon the success of the most predictable sires in the business and their progress is certainly documented. This leads us to believe that we are continuing to remove the genetic risk in these cattle and they will ultimately lead to a more consistent product for our customer. This is the most diverse group we have ever brought to market and yet the genetics have many things in common. The successful growth of our composite program has to be one of the highlights of this offering. We feel the additions of the Red Angus composites in the fall group and the Connealy Capitalist Angus composites in the spring pen have grabbed the attention of many as they have walked through these bulls. Not taking anything away from the purebred Shorthorns, many have certainly proven they will have the performance to compete with the heterosis of their composite counterparts. We feel the performance of the entire offering is increased over previous years, as it should be, and without sacrificing birthweight or calving ease. More than 85% of the offering, bulls and heifers, are in the Top 20% for \$CEZ and BEPD and 95% are in the Top 20% for CEM. As you build, that previously mentioned, extra value into your genetic base, it's also worthy of noting that the bulls have an average Marbling EPD in the Top 15% of the breed and REA EPD in the Top 30%.

Continue to check in at our newly redesigned website, Lovingfarms.com, for videos and sale updates. We will be ultrasounding the spring bulls and heifers the first part of February and we will make that information available online. We will also be broadcasting the sale live on DVAuctions.com, so if you are unable to attend, please register and use that service. If any of our sale representatives can be of service, please do not hesitate to give them a call and utilize them for their unbiased opinions.

The cattle are available for viewing at any time leading up to the sale. We invite everyone to join us to view the cattle Friday evening the 4th and stay for supper and social. Lunch will be served at noon on the 5th with the sale to start at 1:00 PM CST.

We thank you for taking the time to look through our offering and giving us the opportunity to earn your business.

Sincerely,

The Loving Family

LOW PRESSURE BIDDING

Cowboy Auction Procedure

The bid-off will start at 1:00 PM CST, March 5. Bulls will have a starting bid of \$3,000 and heifers will begin at \$1,700. At the time of the bid-off, each individual lot will be announced and all who wish to bid on that lot will be asked to raise their bidder number. Each bidder will be "in" until he chooses to lower his card and withdraw. Each \$100 increment will be announced, and the bidders will be given time to consider whether they are "in" or "out," before the next increment is announced. When only one bidder remains, they will have "won" that lot.

If you are unable to attend or for advanced bidding, contact any of the listed phone numbers to set up bidding by proxy or bid online at DVAuction.com.

Please register to bid at DVAuctions.com.

This sale will be broadcast live on the internet.

1

Sometimes the planned matings for a first calf heifer so totally exceed expectations. 4729 is that case. Top of his contemporary groups in all categories with indexes like 123, 108, 171, and 114. His epd line is the evidence backing up actual performance. If you need additional proof, the cow family backing him has produced sale topping bulls in several previous sales. This is one of the most predictable, young sires to sell this spring, plus you won't find that performance in a more attractive package.

As the name of our sale says, Predictable and Proven. It will be difficult to find any harder proof than Prestige 4727. Full brother to the Lot 1 and high selling bull from the 2015 sale, 4727 has been a standout since birth. If you're serious about consistent genetics, we can't think of a more powerful genetic package than this.

2

3

There have been very few Kaper 4508 bulls that have shown the kind of rapid growth 4716 has. He has more than adequate weaning performance to go with a heifer safe actual birthweight and BW/CE EPDs.

It will sound like a broken record by the time you finish the catalog, but 4750 is what Prestige 0590 does. They are long bodied, big middled, clean fronted, and extremely muscular. Put that with rapid growth and good ultrasound figures and you have profit in the beef industry.

Packed with red meat, 4739 scanned the third highest %IMF in the fall group. He represents the end of an era, there will be few JSF/RB Prestige 8U genetics to sell after him and he shows the dominant traits of his sire; incredible muscularity, soggy middled and super easy fleshing.

This bull's sire, Commando, was our go to heifer bull as we never assisted a calf by him. 4783 carries that great calving ease and blends it well with a shot of performance. He will give you restful nights without sacrificing weaning weight and mature size.

Double the Red

These 3 young sires don't leave a lot to the imagination of how good a combination of Shorthorn and Red Angus genetics can be. They are incredibly powerful in their design with super growth numbers and yet were all light birthweight calves. They possess great growth numbers and predictability. Take one or three, they are even enough you won't go wrong.

Don't let the weaning weight deter you from this calf, as his mother was a first calf heifer. The 4508's have a little slower growth curve and this guy made up a lot of ground post weaning.

The largest Ribeye area bull in the offering and a Top 20% for REA EPD. This Marquis calf has great balance in all numbers.

20

It's a little unfair to the spring bulls to never start the catalog with them. Bulls like 5535 are definitely deserving of that top spot. You will immediately gravitate to this high-growth 0590 son because of his eye appealing quality and muscular shape. Add to that solid actual performance figures and good EPDs, he will certainly capture your attention.

21

Combining the added growth of President C20x with the mass and power of Prestige 8U, 5547 gives you a solid, attractive package. He is long bodied and big middled, yet is very refined through his front end which should support consistent calving ease.

Here is a stout featured and big bodied ¾ blood. His mother is one of the most consistent F1 females we have. After a string of heifers, she placed two top bulls in the last two sales. 5539's impressive birth and CE numbers suggest he will be more than heifer safe.

These bull's mothers go back to the Legacy line of cattle and they were extremely attractive and quite maternal. Add in Prestige 0590 and you get added width and extension. This combination is impressive in that you have great calving ease balanced with growth. They are identical in kind and consistent as can be.

SALE TERMS

Semen and Breeding Soundness Exams

All of the older bulls will be semen checked and Breeding Soundness Exam performed by sale day. The Spring yearlings will be checked by delivery date provided they are at least 12 months old.

Insurance

You may purchase insurance on the day of the sale. If insurance is not purchased, bulls will be at the buyer's risk.

Terms and Conditions

Terms of the sale are cash or check. Payment must be made to the clerk immediately following the sale and before the cattle are removed from the sale facility. Purchasers or their representatives must sign the bill of sale prior to leaving the sale site.

Liability

Each bull will be at the buyer's risk as soon as sold, but will be cared for by the sellers for a reasonable amount of time. Neither the owners, employees, nor any other affiliated personnel can be responsible for any accidents,

but they will make every effort to provide for the safety and comfort of those attending.

Delivery

All lots picked up on sale day will receive a discount of \$100/lot. All lots not taken sale day will be kept free until April 1, 2016. Delivery can be arranged and will be made at the most reasonable cost.

Genetic Testing

All lots have been tested for all known genetic conditions and are free unless otherwise noted.

Breeding Guarantee

All bulls are guaranteed for the first breeding season, as defined by the first 90 days following turnout. If a replacement bull is available, he will be provided or if the buyer prefers, credit towards one bull will be given in the following sale, less salvage value of the injured bull. All injured bulls must be diagnosed and documented by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2016.

DOLLAR INDEXES

\$CEZ – (\$ Calving Ease)

This index assumes a bull will only be mated to heifers, not cows. The potential profitability of the sire is measured by the incidence of live calves at birth. Moderate mature size is also emphasized in the index, but performance is not a priority.

\$F – (\$ Feedlot)

This multi-trait index assumes the sire will be mated to a mix of heifers and cows and attempts to measure profitability when progeny are sold on the feed market. On the female side, mature size should be monitored closely when selecting for \$F.

\$BMI – (\$ British Maternal Index)

This multi-trait selection index attempts to measure a bull's potential profitability when complimenting the British cow base (Angus, Red Angus, Hereford, etc.). A balance of growth and carcass traits is desired with a strong maternal component aimed at optimum reproductive efficiency and cow longevity.

DOCILE. MATERNAL. PRODUCTIVE.

A calving ease specialist with enough meat to her to add that acceptable level of weaning performance. She is really pretty in the way she comes together and you'd be hard pressed to find this blend of genetic and function.

A heifer that came premature in really cold weather, but she is a survivor. She hasn't caught up yet, but the cow family behind her suggests she will breed at another level, as her maternal grandmother is mother to Lot #27. The predictability is there.

After the Sale...

How have the bulls got to this condition? Are they going to melt?

Many have asked these questions. How we feed is not a secret and keeping these bulls sound on their feet and in good body condition is paramount. It is a logical question, considering our customers are making a multiyear investment. Increasing a bull's longevity and the amount of work he can handle both contribute to the long term profitability of your cow/calf enterprise. It is a priority for us to manage these bulls in such a way as to maximize these traits.

Development of the herd bulls is a task not taken lightly and we employ the expertise of John Ney with Nutrition Solutions to help balance the feed rations as well as to monitor the intake and performance of the bulls. The bulls start out on the cow without creep feed and only relying on their mothers for weaning performance. This allows us to evaluate the performance of the cow as well as the calf. They are weaned on the high forage portion content mixed ration containing sorghum sudan hay, corn silage, and wet distiller's grain, and they are allowed to grow at a slower pace to increase frame and give them time to develop. As final selections are made, the sale bulls are moved to a ration containing higher energy and yet maintaining a higher forage content. These bulls never see a concentrate ration and we feel that is important to a digestive system that will only have access to a forage based system post sale. Exercise is a key in the development of a young sire, we feel that it's important to give them access to plenty of space to move to aid in their growth.

We feel that prospective buyers will see the individual traits of the genetics expressed with the bulls in good condition. Careful management will provide for multiple years of service without risking your investment.

If I buy Loving Farms Genetics, what marketing opportunities are available?

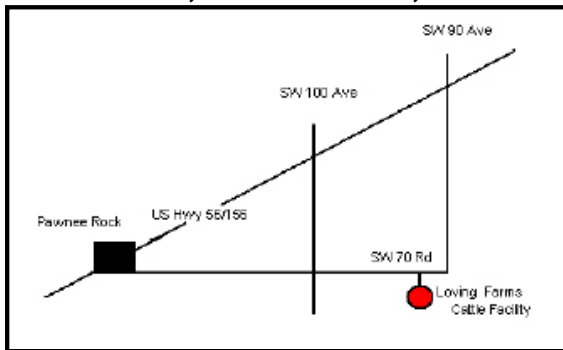

Loving Farms believes in your success with our genetics so much that we want to help you market your cattle. With our never ending goal of bettering our product, comes the need for us to constantly collect more data on their performance. With that being said, we have several feeding partners and marketing specialists that have an appetite for Shorthorn-influenced cattle. Having worked firsthand with these operations, we are confident in their abilities to help you earn more dollars on your Shorthorn investment. Whether it is marketing at weaning or retaining some or all of your ownership through the feedlot, please allow us to help coordinate the outlet for you. All we ask for in return for this service is the opportunity to continue to supply your Shorthorn genetics. Loving Farms would also welcome access to any of the data generated to go into our data collection service to further our ability in evaluating genetics.
